KSP Datathon: The Final Strategic Additions

Your Best Friend

June 25, 2026

The Final Missing Pieces to Guarantee Victory

To leave absolutely no points on the table, we must integrate the explicit clues dropped by the KSP organizers during their sessions.

1. Digitizing the "Crimes in Karnataka" Handbook

The Concept: Dr. Mohanty explicitly requested the modernization of their static annual handbook.
The Execution: Inside your Streamlit UI, create a dedicated tab called **"Digital Handbook."** Write a Python function that uses your synthetic data to generate dynamic, clickable bar charts and drill-down tables for "Crimes by District" and "Year-over-Year Trends."

AI Prompt: Digital Handbook UI

"Act as a Python Streamlit Developer. Create a dashboard tab called 'Digital Handbook'. Write code to load a synthetic crime CSV and generate dynamic Plotly charts (bar charts for Crimes by District, line charts for Year-over-Year trends) and a drill-down dataframe that users can filter by crime type and location."

2. Using Zoho QuickML for Predictions

The Concept: The organizers specifically namedropped **Catalyst QuickML** for machine learning workflows.
The Execution: Instead of running Python ML models entirely on your laptop, upload a slice of your dataset to the Zoho QuickML console. Use their no-code pipeline to generate predictions, and pull those results into your app via API.

AI Prompt: Zoho QuickML Integration

"Act as a Zoho Catalyst Expert. Write a Python script demonstrating how to call a deployed Zoho QuickML endpoint via REST API. The script should send a payload of current crime data, receive the predicted future crime coordinates, and format the response into a Pandas dataframe."

3. The "Resource Tab" Rubric Hack

The Concept: The exact evaluation parameters will be hidden in the "Resource Tab" on the hackathon dashboard.
The Execution: Download that rubric on July 19th. Create a section in your GitHub `README.md` called **"Grading Alignment"** and build a checklist showing exactly where in your code you solved each of their specific requirements.

AI Prompt: Rubric Alignment

"Act as a Technical Writer. Create a Markdown template for a GitHub README.md titled 'Grading Alignment'. Include a markdown checklist table with columns for 'Hackathon Rubric Criteria', 'Our Implementation', and 'File/Code Reference' to prove to the judges that every requirement was met."

Kanglishnalli Vivarane (The Final Missing Pieces in Kanglish)

Geleya SHRIDHAR, neevu tumba sharp! Navu 3D map mattu AI bagge yochane maduvaga, KSP rules nalli helida 3 mukhya vishayagalannu miss madiddive. Idu final list:

1. "Crimes in Karnataka" Digital Handbook

Dr. Mohanty avaru haleya print aagiro handbook annu digital madabeku anta heliddaru. Adakke nimma Streamlit website nalli "Digital Handbook" anta ondu separate tab haki. Alli nimma data balasi dynamic aagi charts mattu tables torisi. Pitch maduvaga, "Neevu kelida handbook idene" anta torisi.

2. Zoho QuickML Balasuvudu

Navu crime predict madalu normal Python library balasona anta idvi. Aadare avaru Zoho **QuickML** annu kaddayavagi hesaru heliddare. Adakke nimma ML predictions annu Zoho QuickML nalli madi, aa result annu API moolaka nimma 3D map ge link madi. Idu avarige tumba ishta agutte.

3. Rubric Alignment (Grading Hack)

Avaru judges ge ondu secret 'Rubric' (marks kodudu hege anta) koduttare. Adu nimage dashboard na 'Resource Tab' nalli sigutte. Aa rubric annu download madi, nimma GitHub `README.md` nalli copy-paste madi. "Neevu kelida pratiyondu rule annu navu hege solve madiddive" anta ondu checklist madi torisi. Aaga judges nimage full marks kodalebeku!
